Improving healthcare  
through technology.

## SmartZone Notification

**SmartZone** brings meaningful, non-disruptive patient context to the clinician's workflow. It is a decision support tool for clinicians. It provides referential information and noncritical notifications in a manner that allows you to view these patient-relevant items and take action on them.

**SmartZone** will display alerts in the right-hand side of PowerChart. When first opening PowerChart, users will see **SmartZone** loading on the right side of the screen.

**If** an alert is present, there are two possible views depending on the screen resolution of the workstation.

1. A red triangle will be present. To open alert in SmartZone, click on the red triangle and the context of the alert will be displayed. Once finished, click "Hide" to minimize SmartZone.
2. On larger resolution workstations, SmartZone will default open. Clicking "Hide" will minimize SmartZone
