

Foley Indwelling Order change

MD/DO/PA/NP and Nursing - Prod Date: 11/18/15

S	There are 4 separate orders for ordering a Urinary Catheter to be inserted, marinated and/or removed
B	The order build allows the Indwelling order to capture indications for insertion. The other orders do not require capturing this information. However this build does not follow current workflow of modifying or discontinuing an existing order.
A	Combine the maintenance and remove orders back into the indwelling and intermittent orders, allowing current order entry workflow to be followed.
R	Only have two orders: Catheter Urinary Indwelling Catheter Urinary Intermittent

Catheter Urinary Indwelling

Defaults to Foley, but can be changed to Coude or 3 Way
Can be found by searching on "Foley"

Physician Workflow

Insertion: Place the Foley order with intervention of Insert

Removal: Do have the Foley removed, D/C the original order, or Choose remove from the CAUTI Alert

UROLOG or GYN provider d/c only: If yes, only a Urologist or Gynecology provider should d/c order

Patient arrives to facility with a Foley: Place the order with intervention of continue existing catheter or Remove
